Application for the practice : Junior Front-End Developer

I apply for the job of Junior Front-End Developer. I like your approach regarding your employees. I consider that the best solution for me is to start my own career exactly in your company.

I am the student at the International University in Travnik, the faculty of electrical engineering, computing and informatics. I finished high school in Travnik (Gimnazija – MSŠ Travnik), I was one of the best students in my generation. Now I attend the third year at college. By the end of June I will finish my education (bachelor). In addition to the school obligations I spend a lot of time improving myself in my free time. Average grade on my first year 8,5, second year 8,9.

I made two projects, Web sites (Fast Food, Champions league overview). I used web technology HTML, CSS and JS. I also used SQL Server Management studio to make a base where data will be stored, sent by users (Visual Studio).

My level of knowledge of languages HTML/CSS is on advanced level, I am familiar with basic tags as well as framework Bootstrap to make the site responsive for mobiles, laptops and desktops. I'm familiar with object oriented programming. I am familiar with jQuery, Vanilla at the beginning level. I know how to reach wanted elements and then to animate them and make them more functional. I know C ++ to pointers including them (following the script of Prof. Željko Jurić) and I have the desire to continue and learn even more about this very powerful programming language. I know Photoshop to an extent that has been so far useful for me, beginner's level.

My level of knowledge of SQL Management Studio is on beginner's level. I can create tables, bind them, write procedures for inserting, updating, deleting and to make queries for obtaining certain data from one or more tables. As far as ASP.NET is concerned, I have been following lectures from FIT from Mostar and I managed to link my two web sites to the database, but it would also be labeled as a beginner level.

I am eager to deal with real programming problems in a motivating, successful environment. I am very ambitious, versatile, communicative, moral and progressive person. This is confirmed by the results of my previous education. I am responsible and perform my duties accurately and promptly. I am innovative, promising and friendly, and ready to accept all the suggestions in their entirety to achieve common interests. I sincerely hope that you will give me a chance to explore my potentials and desire for work and learning. Your company will give me quality skills and knowledge which I need.

Thank you for your time.

With respect, Haris Hodžić
